

When it comes to picking rocks from fields... nobody does it better than NORTEC

"Adjustable Boom"

"Fixed Position Boom"

Choose either a Boom "Conveyor" style or Hopper "Box" (3-Yard) style machine.

Nortec Rockpickers are built to work hard, last long and retain their value. Even after years of use, **Nortec Rockpickers can be worth nearly as much and sometimes more than their original purchase price.**

Rock picking made easy. Collecting and removing rocks and debris is only part of the story. Recycling those unwanted rocks for useful needs such as landfill, water control (riff-raff rock shoring), road-building, landscaping - just to name a few. Harvesting rocks can and will turn the rockpicking operation into a income instead of an expense. There is a large need for custom rockpicking.

Rockpicking Operating Mode**

Attachment Modular Design: Attachment are easy on easy off design. This offers the customer several benefits. 1) Making servicing easy and quick, if there a need to repair the rockpicker and removing the attachment out of the way makes a job easier and faster this modular design allows for easy servicing. 2) Allows the customer to switch attachment such as going from box to conveyor boom.

Quality components result in low maintenance requirements. This means more run time, lowering your cost per acre of operation.

Hook

Choose from either hook or belted chain. Chain has been used as a standard for conveying produce, rocks, trash, and many other products. Its primary use is in severe applications where strength, toughness, stiffness, and durability are required. Construction is individually heat treated steel links hooked together to form a continuous conveyor.

Belted

Unworkable rock filled field will soon be made ready for planting with a Nortec Rockpicker. Picks both surface and subsurface rocks, leaving fields clear of rocks for years to come. After one pass a Nortec Rockpicker turns unusable land into productive, rock free land.

Your Authorized **NORTEC** Dealer

Require that the land be loosened to a depth slightly deeper than that at which the Rockpicker will be run. The land may be loosened with chisel plows, disc harrows, or other similar tools.
