

NORTEC

RBC 05 Series

Purpose Built Rotary Broom

**Affordable
Low Cost**

An economical, yet powerful rotary broom for your compact skid steer. This hydraulic-driven, manual angle broom (optional electric actuator) quickly and efficiently sweeps away dirt, dried mud, light snow and other debris.

This is sweeping made easy that takes the hand work out of sweeping. Excellent for sweeping sidewalks, parking areas and warehouses. Works great for light snow removal without damaging the surface. If scratching or gouging a surface such as concrete or blacktop is a concern, there's nothing like a rotary broom. The sweeper is amazing for lawn thatch removal and is the best thatcher you will ever use.

The Nortec RBC-05 Series is in addition to the RBC 10 Series Premier SweepTEC line of rotary brooms.

Industry is asking for a low cost, light weight sweeper designed for smaller power units. It has a maneuverable broom that's operator friendly and easy to see.

Inboard drive system lets you clean sweep from the left or right side without any interference. A chain drive along the side frame allows mounting the hydraulic motor inboard which is well protected against damage.

3-Position manual angle allows straight, right or left sweeping action. This 25 degree angle provides for windrowing of material.

The RBC 05 Series features a high performance tube broom, increased sweeping performance over the wafer style bristles and it lasts longer.

SweepTEC

Rotary Broom

Purpose Built Rotary Broom Built for a purpose, economically priced, light weight, excellent visibility and short coupled to the power unit for maneuverability. Excellent for general sweeping conditions.

Inboard Hydraulic Drive System

Tube Broom

- * Better flick action for thorough debris collection.
- * More sweeping ends per square inch of broom face.
- * Tight and consistent broom wraps.

“**Flick Action**” is the movement of the broom bristle when in use. Each strand “flicks” as the broom rotates. Flicking of the filament is required for best sweeping results. If you are flicking, you are sweeping. If you are not flicking, you are not sweeping.

Best Flicking Broom On the Market!

**Choose From Poly
or 50/50 Poly/Wire
Combination**

Professionals who understand the value of quality products make Sweep TEC their first choice for quality-built Tube Brooms. Our Tube Brooms give you better sweeping coverage with more broom wraps and more aggressive sweeping than our competitor’s brooms, for impressive sweeping results.

Optional Electric Actuator Angle

Mountings: Nortec offers 2 styles of mountings, universal skid steer and mini skid steer mounting.

RBC405

Weight: 250 lbs. (with actuator, 240 lbs. without)
Flow Range: 8-13 gpm
Length: 38" (with mount) 32" (with no mount)
Width: 61" (Outside to Outside) 54" (Broom)
Height: 16" (Without Hood, broom is 16" diameter)
 Bristle Material: Poly or 1/2 Poly 1/2 Steel
 Broom Angling: Electric Actuator or Manual 3-Position
 Broom Bristle Diameter: 16"
 Drive System: Hyd. Motor Chain Drive Reduction
 Sweep Width (Fully angled): 48" At 28 degrees
 Sweep Width (Fully angled): 49" At 25 degrees
 Sweep Width (Straight): 54"
